

ArchAI Planner

Autonomous Software Architecture Planning & Evolution Using Agentic AI

"From Requirements to Architecture in Under 25 Seconds · Zero AI Hallucination · Greenfield + Brownfield"

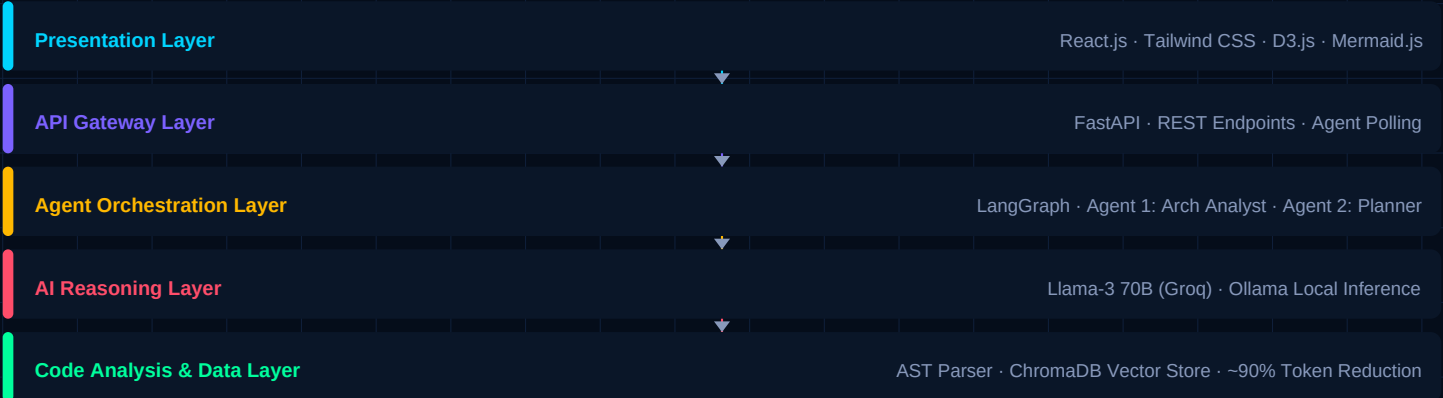

THE PROBLEM

Architects spend weeks manually drafting blueprints. SonarQube & ESLint miss architectural anti-patterns. GPT hallucinates class names on large codebases. No unified tool for both new & legacy systems.

OUR SOLUTION

Multi-agent AI with LangGraph orchestration. AST parsing compresses tokens by ~90%. ChromaDB memory learns from past decisions. Interactive D3.js architecture visualizations.

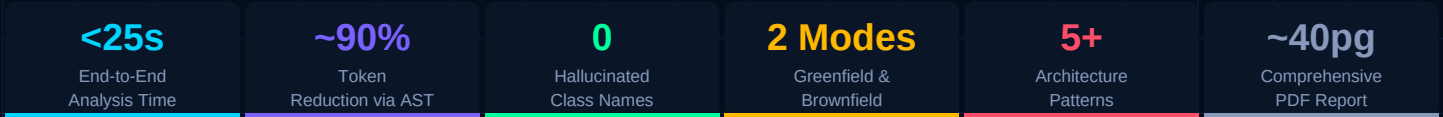

SYSTEM ARCHITECTURE

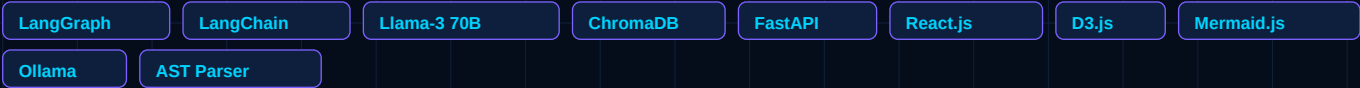

DUAL-MODE OPERATION

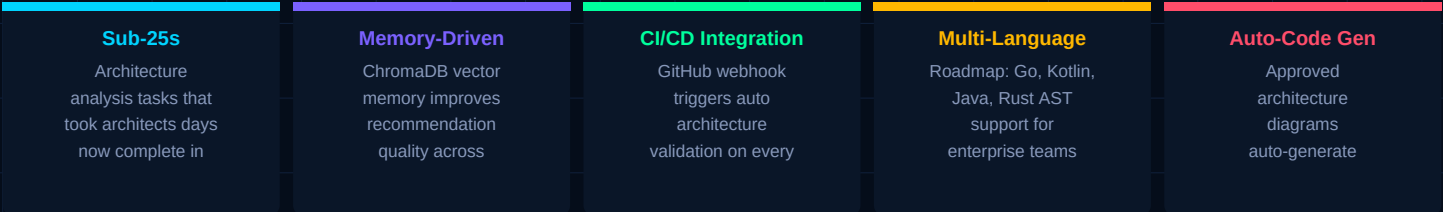

KEY ACHIEVEMENTS

TECH STACK

IMPACT & FUTURE SCOPE

INNOVATION POTENTIAL → Compresses architect-days into seconds · Eliminates AI hallucination · Ready for enterprise CI/CD pipelines
